Pilot 1 – Feb/March 2024 With SMS Marketing.

- 1. Across the six sessions we had 64 patients attend, many of them joining on the day specifically to speak to someone from TfS and not just attending an existing doctors or nurses appointment.
- 2. Data mirrors TfS data with Female/Male split.
- 3. Data suggests we were able to engage with more residents who identified as part of the global majority. A total of 58% of the community visiting these sessions were from the global majority. This is an exciting trend and may support future outreach work.

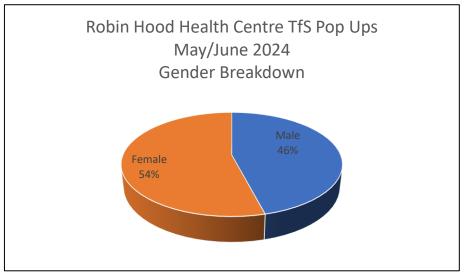

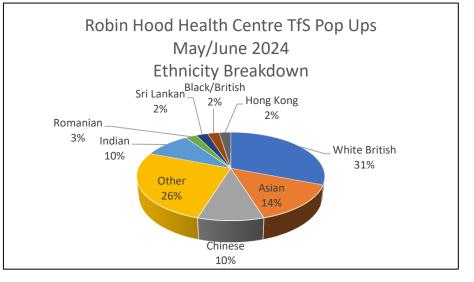

Pilot 2 – May/June 2024 Without SMS Marketing.

- 1.Across six sessions we had 42 patients attend, almost all of them ONLY attending because they had an existing appointment.
- 2. Observed a slight increase in males asking for support (up 7%).
- 3.43% of patients presenting for help throughout the sessions were from the global majority. Despite drop in footfall, ethnic diversity is strong.
